

Technical data

Ratings

By type designation, the table below provides ratings for the ACS550 adjustable speed AC drive, including:

- IEC ratings
- NEMA ratings (shaded columns)
- frame size.

Ratings, 208...240 V drives

Abbreviated column headers are described in section [Symbols](#) on page 279.

| Type ACS550-x1- see below | Normal use | | | Heavy-duty use | | | Frame size |
|---|---------------|-------------|-------------|----------------|----------------|----------------|---------------|
| | I_{2N} A | P_N kW | P_N hp | I_{2hd} A | P_{hd} kW | P_{hd} hp | |
| Three-phase supply voltage, 208...240 V | | | | | | | |
| -04A6-2 | 4.6 | 0.75 | 1 | 3.5 | 0.55 | 0.75 | R1 |
| -06A6-2 | 6.6 | 1.1 | 1.5 | 4.6 | 0.75 | 1 | R1 |
| -07A5-2 | 7.5 | 1.5 | 2 | 6.6 | 1.1 | 1.5 | R1 |
| -012A-2 | 11.8 | 2.2 | 3 | 7.5 | 1.5 | 2 | R1 |
| -017A-2 | 16.7 | 4 | 5 | 11.8 | 2.2 | 3 | R1 |
| -024A-2 | 24.2 | 5.5 | 7.5 | 16.7 | 4 | 5 | R2 |
| -031A-2 | 30.8 | 7.5 | 10 | 24.2 | 5.5 | 7.5 | R2 |
| -046A-2 | 46.2 | 11 | 15 | 30.8 | 7.5 | 10 | R3 |
| -059A-2 | 59.4 | 15 | 20 | 46.2 | 11 | 15 | R3 |
| -075A-2 | 74.8 | 18.5 | 25 | 59.4 | 15 | 20 | R4 |
| -088A-2 | 88.0 | 22 | 30 | 74.8 | 18.5 | 25 | R4 |
| -114A-2 | 114 | 30 | 40 | 88.0 | 22 | 30 | R4 |
| -143A-2 | 143 | 37 | 50 | 114 | 30 | 40 | R6 |
| -178A-2 | 178 | 45 | 60 | 150 | 37 | 50 | R6 |
| -221A-2 | 221 | 55 | 75 | 178 | 45 | 60 | R6 |
| -248A-2 | 248 | 75 | 100 | 192 | 55 | 75 | R6 |

00467918.xls C

Ratings, 380...480 V drives

Abbreviated column headers are described in section [Symbols](#) on page 279.

| Type ACS550-x1- see below | Normal use | | | Heavy-duty use | | | Frame size |
|--|---------------|-------------|-------------|----------------|----------------|----------------|---------------|
| | I_{2N} A | P_N kW | P_N hp | I_{2hd} A | P_{hd} kW | P_{hd} hp | |
| Three-phase supply voltage, 380...480 V | | | | | | | |
| -03A3-4 | 3.3 | 1.1 | 1.5 | 2.4 | 0.75 | 1 | R1 |
| -04A1-4 | 4.1 | 1.5 | 2 | 3.3 | 1.1 | 1.5 | R1 |
| -05A4-4 | 5.4 | 2.2 | Note 1 | 4.1 | 1.5 | Note 1 | R1 |
| -06A9-4 | 6.9 | 3 | 3 | 5.4 | 2.2 | 3 | R1 |
| -08A8-4 | 8.8 | 4 | 5 | 6.9 | 3 | 3 | R1 |
| -012A-4 | 11.9 | 5.5 | 7.5 | 8.8 | 4 | 5 | R1 |
| -015A-4 | 15.4 | 7.5 | 10 | 11.9 | 5.5 | 7.5 | R2 |
| -023A-4 | 23 | 11 | 15 | 15.4 | 7.5 | 10 | R2 |
| -031A-4 | 31 | 15 | 20 | 23 | 11 | 15 | R3 |
| -038A-4 | 38 | 18.5 | 25 | 31 | 15 | 20 | R3 |
| -045A-4 | 45 | 22 | 30 | 38 | 18.5 | 25 | R3 |
| -059A-4 | 59 | 30 | 40 | 44 | 22 | 30 | R4 |
| -072A-4 | 72 | 37 | 50 | 59 | 30 | 40 | R4 |
| -078A-4 | 77 | Note 2 | 60 | 72 | Note 2 | 50 | R4 |
| -087A-4 | 87 | 45 | Note 1 | 72 | 37 | Note 1 | R4 |
| -097A-4 | 97 | Note 2 | 75 | 77 | Note 2 | 60 | R4 |
| -125A-4 | 125 | 55 | Note 1 | 87 | 45 | Note 1 | R5 |
| -125A-4 | 125 | Note 2 | 100 | 96 | Note 2 | 75 | R5 |
| -157A-4 | 157 | 75 | 125 | 124 | 55 | 100 | R6 |
| -180A-4 | 180 | 90 | 150 | 156 | 75 | 125 | R6 |
| -195A-4 | 205 | 110 | Note 1 | 162 | 90 | Note 1 | R6 |
| -246A-4 | 246 | 132 | 200 | 192 | 110 | 150 | R6 |
| -290A-4 | 290 | 160 | Note 1 | 246 | 132 | 200 | R6 |

2. Not available in ACS550-01 series.

Ratings, 500...600 V drives

Abbreviated column headers are described in section [Symbols](#) on page 279.

| Type ACS550-U1- see below | Normal use | | | Heavy-duty use | | | Frame size |
|--|---------------|-------------|-------------|----------------|----------------|----------------|---------------|
| | I_{2N} A | P_N kW | P_N hp | I_{2hd} A | P_{hd} kW | P_{hd} hp | |
| Three-phase supply voltage, 500...600 V (Note 1) | | | | | | | |
| -02A7-6 | 2.7 | 1.5 | 2 | 2.4 | 1.1 | 1.5 | R2 |
| -03A9-6 | 3.9 | 2.2 | 3 | 2.7 | 1.5 | 2 | R2 |
| -06A1-6 | 6.1 | 4 | 5 | 3.9 | 2.2 | 3 | R2 |
| -09A0-6 | 9.0 | 5.5 | 7.5 | 6.1 | 4 | 5 | R2 |
| -011A-6 | 11 | 7.5 | 10 | 9.0 | 5.5 | 7.5 | R2 |
| -017A-6 | 17 | 11 | 15 | 11 | 7.5 | 10 | R2 |
| -022A-6 | 22 | 15 | 20 | 17 | 11 | 15 | R3 |
| -027A-6 | 27 | 18.5 | 25 | 22 | 15 | 20 | R3 |
| -032A-6 | 32 | 22 | 30 | 27 | 18.5 | 25 | R4 |
| -041A-6 | 41 | 30 | 40 | 32 | 22 | 30 | R4 |
| -052A-6 | 52 | 37 | 50 | 41 | 30 | 40 | R4 |
| -062A-6 | 62 | 45 | 60 | 52 | 37 | 50 | R4 |
| -077A-6 | 77 | 55 | 75 | 62 | 45 | 60 | R6 |
| -099A-6 | 99 | 75 | 100 | 77 | 55 | 75 | R6 |
| -125A-6 | 125 | 90 | 125 | 99 | 75 | 100 | R6 |
| -144A-6 | 144 | 110 | 150 | 125 | 90 | 125 | R6 |

00467918.xls C

1. Not available in ACS550-01 series.

Symbols

Typical ratings:

Normal use (10% overload capability)

I_{2N} continuous rms current. 10% overload is allowed for one minute in ten minutes.

P_N typical motor power in normal use. The kilowatt power ratings apply to most IEC, 4-pole motors. The horsepower ratings apply to most 4-pole NEMA motors.

Heavy-duty use (50% overload capability)

I_{2hd} continuous rms current. 50% overload is allowed for one minute in ten minutes.

P_{hd} typical motor power in heavy duty use. The kilowatt power ratings apply to most IEC, 4-pole motors. The horsepower ratings apply to most 4-pole NEMA motors.

Sizing

The current ratings are the same regardless of the supply voltage within one voltage range. To achieve the rated motor power given in the table, the rated current of the drive must be higher than or equal to the rated motor current. Also note that:

- the ratings apply for ambient temperature of 40 °C (104 °F)
- the maximum allowed motor shaft power is limited to $1.5 \cdot P_{hd}$. If the limit is exceeded, motor torque and current are automatically restricted. The function protects the input bridge of the drive against overload.

In multimotor systems, the output current of the drive must be equal to or greater than the calculated sum of the input currents of all motors.

Derating

The load capacity (current and power) decreases for certain situations, as defined below. In such situations, where full motor power is required, oversize the drive so that the derated value provides sufficient capacity.

For example, if your application requires 15.4 A of motor current and a 8 kHz switching frequency, calculate the appropriate drive size requirement as follows:

$$\text{The minimum size required} = 15.4 \text{ A} / 0.80 = 19.25 \text{ A}$$

Where: 0.80 is the derating for 8 kHz switching frequency (see section [Switching frequency derating](#) on page [280](#)).

Referring to I_{2N} in the ratings tables (starting from page [277](#)), the following drives exceed the I_{2N} requirement of 19.25 A: ACS550-x1-023A-4, or ACS550-x1-024A-2.

Temperature derating

In the temperature range +40 °C...50 °C (+104 °F...122 °F), the rated output current is decreased 1% for every 1 °C (1.8 °F) above +40 °C (+104 °F). Calculate the output current by multiplying the current given in the rating table by the derating factor.

Example If the ambient temperature is 50 °C (+122 °F), the derating factor is 100% - 1%/°C · 10 °C = 90% or 0.90.

The output current is then $0.90 \cdot I_{2N}$ or $0.90 \cdot I_{2hd}$.

Altitude derating

In altitudes 1000...4000 m (3300...13,200 ft) above sea level, the derating is 1% for every 100 m (330 ft). If the installation site is higher than 2000 m (6600 ft) above sea level, contact your local ABB representative for further information.

Single phase supply derating

For 208...240 V series drives, a single phase supply can be used. In that case, the derating is 50%.

Switching frequency derating

When using the 8 kHz switching frequency (parameter 2606),

- derate all rated currents and powers (including drive's overload currents) to 80%.

When using the 12 kHz switching frequency (parameter 2606),

- derate all rated currents and powers (including drive's overload currents) to 65% (to 50% for 600 V, R4 frame sizes, that is for ACS550-U1-032A-6 ... ACS550-U1-062A-6),
- derate ambient temperature maximum to 30 °C (86 °F).
- Note: The continuous maximum current is limited to I_{2hd} .

Note: Setting parameter 2607 SWITCH FREQ CTRL = 1 (ON) allows the drive to reduce the switching frequency if/when the drive's internal temperature exceeds 80 °C (with 12 kHz switching frequency) or 90 °C (with 8 kHz switching frequency). See the parameter description for 2607 for details.

Input power connections

WARNING! Do not operate the drive outside the nominal input line voltage range. Overvoltage can result in permanent damage to the drive.

Input power specifications

| Input power (mains) connection specifications | |
|--|---|
| Voltage (U_1) | 208/220/230/240 V AC 3-phase (or 1-phase) -15%...+10% for ACS550-x1-xxxx-2. 380/400/415/440/460/480 V AC 3-phase -15%...+10% for ACS550-x1-xxxx-4. 500/525/575/600 V AC 3-phase -15%...+10% for ACS550-U1-xxxx-6. |
| Prospective short-circuit current (IEC 629) | Maximum allowed prospective short-circuit current in the supply is 100 kA providing that the input power cable of the drive is protected with appropriate fuses. US: 100 000 AIC. |
| Frequency | 48...63 Hz |
| Imbalance | Max. \pm 3% of nominal phase to phase input voltage |
| Fundamental power factor ($\cos \phi_1$) | 0.98 (at nominal load) |
| Cable temperature rating | 90 °C (194 °F) rating minimum |

Disconnecting device for isolation

Install a hand-operated input disconnecting device (disconnecting means) between the AC power source and the drive. The disconnecting device must be of a type that can be locked to the open position for installation and maintenance work.

- **Europe:** To meet the European Union Directives, according to standard EN 60204-1, Safety of Machinery, the disconnecting device must be one of the following types:
 - a switch-disconnector of utilization category AC-23B (EN 60947-3)
 - a disconnector having an auxiliary contact that in all cases causes switching devices to break the load circuit before the opening of the main contacts of the disconnector (EN 60947-3)
 - a circuit breaker suitable for isolation in accordance with EN 60947-2.
- **Other regions:** The disconnecting device must conform to the applicable safety regulations.

Fuses

Branch circuit protection must be provided by the end user and sized per national and local electric codes. The following tables provide fuse recommendations for short circuit protection on the drive's input power.

The rated fuse currents given in the tables are the maximums for the mentioned fuse types. If smaller fuse ratings are used, check that the fuse rms current rating is larger than the input current.

Check that the operating time of the fuse is below 0.5 seconds. The operating time depends on the fuse type, the supply network impedance as well as the cross-sectional area, material and length of the supply cable. In case the 0.5 seconds operating time is exceeded with the gG or T fuses, ultra rapid (aR) fuses will in most cases reduce the operating time to an acceptable level.

Fuses, 208...240 V drives

| ACS550-x1- see below | Input current A | Input power (mains) fuses | | |
|-------------------------|--------------------|---------------------------|----------------|---------------|
| | | IEC 60269 gG (A) | UL Class T (A) | Bussmann type |

00467918.xls C

Emergency stop devices

The overall design of the installation must include emergency stop devices and any other safety equipment that may be needed. Pressing STOP on the drive's control panel does NOT:

- generate an emergency stop of the motor
- separate the drive from dangerous potential.

Input power cables/wiring

Input wiring can be any of:

- a four conductor cable (three phases and ground/protective earth). Shielding is not required.
- four insulated conductors routed through conduit.

Size wiring according to local safety regulations, appropriate input voltage and the drive's load current.

Note: The conductor must be less than the maximum limit defined by the terminal size. Check the maximum wire size according to the table in section [Drive's power connection terminals](#) on page 286.

The table below lists copper and aluminium cable types for different load currents. These recommendations apply only for the conditions listed at the top of the table.

| IEC | | | | NEC | |
|---------------------|--------------------------|---------------------|--------------------------|---------------------|------------------------|
| Based on: | | | | Based on: | |
| Max. load current A | Cu cable mm ² | Max. load current A | Al cable mm ² | Max. load current A | Cu wire size AWG/kcmil |
| 14 | 3×1.5 | | | 22.8 | 14 |
| 20 | 3×2.5 | | | 27.3 | 12 |
| 27 | 3×4 | | | 36.4 | 10 |
| 34 | 3×6 | | | 50.1 | 8 |
| 47 | 3×10 | | | 68.3 | 6 |
| 62 | 3×16 | 61 | 3x25 | 86.5 | 4 |
| 79 | 3×25 | 75 | 3x35 | 100 | 3 |
| 98 | 3×35 | 91 | 3×50 | 118 | 2 |
| 119 | 3×50 | 117 | 3×70 | 137 | 1 |
| 153 | 3×70 | 143 | 3×95 | 155 | 1/0 |
| 186 | 3×95 | 165 | 3×120 | 178 | 2/0 |
| 215 | 3×120 | 191 | 3×150 | 205 | 3/0 |
| 249 | 3×150 | 218 | 3×185 | 237 | 4/0 |
| 284 | 3×185 | 257 | 3×240 | 264 | 250 MCM or 2 × 1 |
| 330 | 3×240 | 274 | 3× (3×50) | 291 | 300 MCM or 2 × 1/0 |
| | | 285 | 2× (3×95) | 319 | 350 MCM or 2 × 2/0 |

Ground connections

For personnel safety, proper operation and reduction of electromagnetic emission/pick-up, the drive and the motor must be grounded at the installation site.

- Conductors must be adequately sized as required by safety regulations.
- Power cable shields must be connected to the drive PE terminal in order to meet safety regulations.
- Power cable shields are suitable for use as equipment grounding conductors only when the shield conductors are adequately sized as required by safety regulations.
- In multiple drive installations, do not connect drive terminals in series.

Corner-grounded TN systems

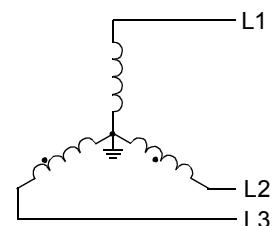

WARNING! Do not attempt to install or remove the EMC filter screws EM1, EM3, F1 or F2 while power is applied to the drive's input terminals.

Corner-grounded TN systems are defined in the following table. In such systems, disconnect the internal ground connection through the EMC filter capacitors (do this also if the grounding configuration of the system is unknown), see section *Disconnecting the internal EMC filter* on page 27.

| Corner-grounded TN systems – EMC filter must be disconnected | | | |
|--|--|---|--|
| Grounded at the corner of the delta | | Grounded at the mid point of a delta leg | |
| Single phase, grounded at an end point | | Three phase "Variac" without solidly grounded neutral | |

The EMC filter capacitors make an internal ground connection that reduces electro-magnetic emission. Where EMC (electro-magnetic compatibility) is a concern, and the system is symmetrically grounded, the EMC filter may be connected. For reference, the diagram on the right illustrates a symmetrically grounded TN system (TN-S system).

IT systems

WARNING! Do not attempt to install or remove the EMC filter screws EM1, EM3, F1 or F2 while power is applied to the drive's input terminals.

For IT systems (an ungrounded power system or a high-resistance-grounded [over 30 ohm] power system):

- Disconnect the ground connection to the internal EMC filter, see section [Disconnecting the internal EMC filter](#) on page [27](#).
- Where EMC requirements exist, check for excessive emission propagated to neighboring low voltage networks. In some cases, the natural suppression in transformers and cables is sufficient. If in doubt, use a supply transformer with static screening between the primary and secondary windings.
- Do NOT install an external RFI/EMC filter. Using an EMC filter grounds the input power through the filter capacitors, which could be dangerous and could damage the drive.

Drive's power connection terminals

The following table provides specifications for the drive's power connection terminals.

Note: See the recommended cable sizes for different load currents in section [Input power cables/wiring](#) on page [284](#).

| Frame size | U1, V1, W1 U2, V2, W2 BRK \pm , UDC \pm terminals | | | | | | Earthing PE terminal | | | |
|------------|---|------------------|-------------------|---------|-------------------|-------|----------------------|-----|-------------------|-------|
| | Minimum wire size | | Maximum wire size | | Tightening torque | | Maximum wire size | | Tightening torque | |
| | mm ² | AWG | mm ² | AWG | N·m | lb·ft | mm ² | AWG | N·m | lb·ft |
| R1 | 0.75 | 18 | 10 | 8 | 1.4 | 1 | 10 | 8 | 1.4 | 1 |

¹ See section [Power terminal considerations – R6 frame size](#) on page [287](#).

Power terminal considerations – R6 frame size

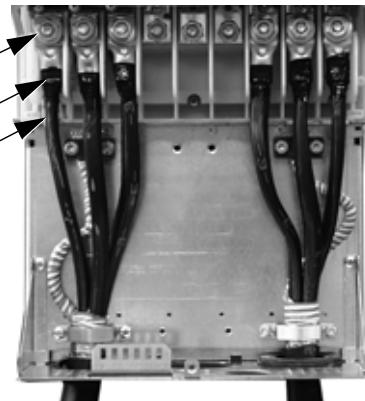

WARNING! For R6 power terminals, if screw-on terminal lugs are supplied, they can only be used for wire sizes that are 95 mm² (3/0 AWG) or larger. Smaller wires will loosen and may damage the drive. They require crimp-on ring lugs as described below.

Crimp-on ring lugs

On the R6 frame size, if screw-on terminal lugs are supplied but the cable size used is less than 95 mm² (3/0 AWG), or if no screw-on terminal lugs are supplied at all, use crimp-on ring lugs according to the following procedure.

1. Select appropriate ring lugs from the following table.
2. Remove the screw-on terminal lugs, if supplied.
3. Attach the ring lugs to the drive end of the cables.
4. Isolate the ends of the ring lugs with insulating tape or shrink tubing.
5. Attach the ring lugs to the drive.

X60002

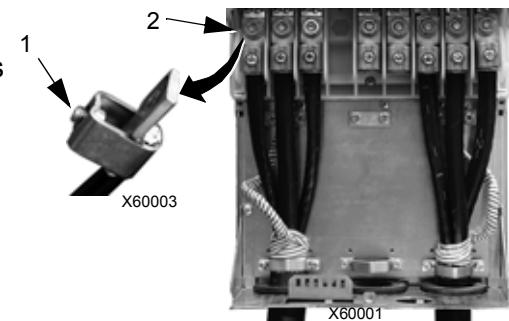

| Wire size | | Manufacturer | Ring lug | Crimping tool | No. of crimps |

Screw-on terminal lugs

Use the following procedure to attach cables if screw-on terminal lugs are supplied and the cable size is 95 mm² (3/0 AWG) or larger.

1. Attach the supplied screw-on lugs to the drive end of the cables.
2. Attach screw-on lugs to the drive.

Motor connections

WARNING! Never connect line power to the drive output terminals: U₂, V₂ or W₂. Line voltage applied to the output can result in permanent damage to the drive. If frequent bypassing is required, use mechanically interlocked switches or contactors.

WARNING! Do not connect any motor with a nominal voltage less than one half of the drive's nominal input voltage.

WARNING! Disconnect the drive before conducting any voltage tolerance (Hi-Pot) test or insulation resistance (Megger) test on the motor or motor cables. Do not conduct these tests on the drive.

Motor connection specifications

| Motor connection specifications | | |
|-----------------------------------|---|--|
| Voltage (U₂) | 0...U ₁ , 3-phase symmetrical, U _{max} at the field weakening point | |
| Frequency | 0...500 Hz | |
| Frequency resolution | 0.01 Hz | |
| Current | See section Ratings on page 277 . | |
| Field weakening point | 10...500 Hz | |
| Switching frequency | Selectable. See the availability in the table below. | |
| | | 1, 2, 4 and 8 kHz |
| 208...240 V | All types | Frame sizes R1...R4 in scalar control mode |
| 380...480 V | All types | Frame sizes R1...R4 (except ACS550-01-097A-4) in scalar control mode |
| 500...600 V | All types | Frame sizes R2...R4 in scalar control mode |
| Cable temperature rating | 90 °C (194 °F) rating minimum. | |
| Maximum motor cable length | See section Motor cable lengths on page 289 . | |

Motor cable lengths

Maximum motor cable lengths for 400 V and 600 V drives are given in the sections below.

In multimotor systems, the calculated sum of all motor cable lengths must not exceed the maximum motor cable length given in the appropriate table below.

Motor cable length for 400 V drives

The table below shows the maximum motor cable lengths for 400 V drives with different switching frequencies. Examples for using the table are also given.

| Frame size | Maximum cable length for 400 V drives | | | | | | | | | | | | | | | | | |
|------------|--|-----|-------|-----|----------------|-----|---|-----|-------|-----|----------------|-----|--------------------|-----|------------------|------------------|--------------------|-----|
| | EMC limits | | | | | | | | | | | | Operational limits | | | | | |
| | Second environment (category C3 ¹) | | | | | | First environment (category C2 ¹) | | | | | | Basic unit | | | | With du/dt filters | |
| | 1 kHz | | 4 kHz | | 8 kHz | | 1 kHz | | 4 kHz | | 8 kHz | | 1/4 kHz | | 8/12 kHz | | | |
| | m | ft | m | ft | m | ft | m | ft | m | ft | m | ft | m | ft | m | ft | m | ft |
| R1 | 300 | 980 | 300 | 980 | 300 | 980 | 300 | 980 | 300 | 980 | 300 | 980 | 100 | 330 | 100 | 330 | 150 | 490 |
| R2 | 300 | 980 | 300 | 980 | 300 | 980 | 300 | 980 | 100 | 330 | 30 | 98 | 200 | 660 | 100 | 330 | 250 | 820 |

¹ See the new terms in section [IEC/EN 61800-3:2004 Definitions](#) on page 311.

² 12 kHz switching frequency is not available.

³ Not tested.

Sine filters further extend the cable lengths.

Under heading "Operational limits", the "Basic unit" columns define the cable lengths with which the basic drive unit works without problems within the drive specification, without installing any further options. Column "With du/dt filters" defines the cable lengths when an external du/dt filter is used.

The columns under heading "EMC limits" show the maximum cable lengths with which the units have been tested for EMC emissions. The factory guarantees that these cable lengths meet the EMC standard requirements.

If external sine filters are installed, longer cable lengths can be used. With sine filters the limiting factors are the voltage drop of the cable, which has to be taken into account in engineering, as well as the EMC limits (where applicable).

The default switching frequency is 4 kHz.

WARNING! Using a motor cable longer than specified in the table above may cause permanent damage to the drive.

Examples for using the table:

| Requirements | Checking and conclusions |
|--|---|
| R1 frame size, 8 kHz fsw, Category C2, 150 m (490 ft) cable | <p>Check operational limits for R1 and 8 kHz -> for a 150 m (490 ft) cable a du/dt filter is needed.</p> <p>Check EMC limits -> EMC requirements for Category C2 are met with a 150 m (490 ft) cable.</p> |

| Requirements | Checking and conclusions |
|---|---|
| R3 frame size, 4 kHz fsw, Category C3, 300 m (980 ft) cable | <p>Check operational limits for R3 and 4 kHz -> a 300 m (980 ft) cable cannot be used even with a du/dt filter. A sine filter must be used and the voltage drop of the cable must be taken into account in the installation.</p> <p>Check EMC limits -> EMC requirements for Category C3 are met with a 300 m (980 ft) cable.</p> |
| R5 frame size, 8 kHz fsw, Category C3, 150 m (490 ft) cable | <p>Check operational limits for R5 and 8 kHz -> for a 150 m (490 ft) cable the basic unit is sufficient.</p> <p>Check EMC limits -> EMC requirements for Category C3 cannot be met with a 300 m (980 ft) cable. The installation configuration is not possible. An EMC plan is recommended to overcome the situation.</p> |
| R6 frame size, 4 kHz fsw, EMC limits not applicable, 150 m (490 ft) cable | <p>Check operational limits for R6 and 4 kHz -> for a 150 m (490 ft) cable the basic unit is sufficient.</p> <p>EMC limits do not need to be checked as there are no EMC requirements.</p> |

Motor cable length for 600 V drives

The table below shows the maximum motor cable lengths for 600 V drives with different switching frequencies. As the 600 V drives are not CE approved, cable lengths for EMC limits are not given.

| Maximum cable length for 600 V drives | | | | |
|---------------------------------------|--------------------|-----|------------------|------------------|
| Frame size | Operational limits | | | |
| | 1/4 kHz | | 8/12 kHz | |
| | m | ft | m | ft |
| R2 | 100 | 330 | 100 | 330 |
| R3...R4 | 200 | 660 | 100 | 330 |
| R6 | 300 | 980 | 150 ² | 490 ² |

² 12 kHz switching frequency is not available.

WARNING! Using a motor cable longer than specified in the table above may cause permanent damage to the drive.

Motor thermal protection

According to regulations, the motor must be protected against thermal overload and the current must be switched off when overload is detected. The drive includes a motor thermal protection function that protects the motor and switches off the current when necessary. Depending on a drive parameter value (see parameter 3501 SENSOR TYPE), the function either monitors a calculated temperature value (based on a motor thermal model, see parameters 3005 MOT THERM PROT ... 3009 BREAK POINT FREQ) or an actual temperature indication given by motor temperature sensors (see [Group 35: MOTOR TEMP MEAS](#)). The user can tune the thermal model further by feeding in additional motor and load data.

The most common temperature sensors are:

- motor sizes IEC180...225: thermal switch (e.g. Klixon)
- motor sizes IEC200...250 and larger: PTC or PT100.

Ground fault protection

ACS550 internal fault logic detects ground faults in the drive, motor, or motor cable. This fault logic:

- is NOT a personal safety or fire protection feature
- can be disabled using parameter 3017 EARTH FAULT
Note: Disabling earth fault (ground fault) may void the warranty.
- could be tripped by leakage currents (input power to ground) associated with long high capacitance motor cables.

Grounding and routing

Motor cable shielding

Motor cables require shielding using conduit, armored cable or shielded cable.

- Conduit – When using conduit:
 - Bridge joints with a ground conductor bonded to the conduit on each side of the joint.
 - Bond conduit run to the drive enclosure.
 - Use a separate conduit run for motor cables (also separate input power and control cables).
 - Use a separate conduit run for each drive.
- Armored cable – When using armored cable:
 - Use six-conductor (3 phases and 3 grounds), type MC continuous corrugated aluminium armor cable with symmetrical grounds.
 - Armored motor cable can share a cable tray with input power cables, but not with control cables.
- Shielded cable – For shielded cable details, see section [Motor cable requirements for CE & C-Tick compliance](#) on page [293](#).

Grounding

See section [Ground connections](#) on page [285](#).

For CE compliant installations and installations where EMC emissions must be minimized, see section [Effective motor cable shields](#) on page [294](#).

Drive's motor connection terminals

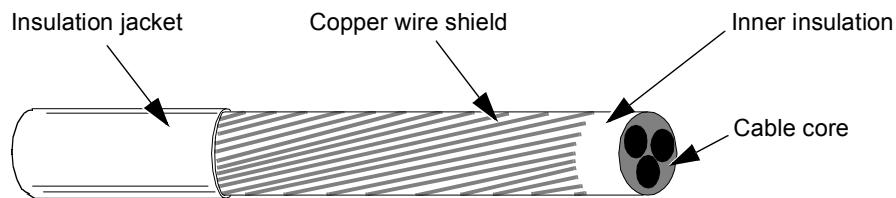

The drive's motor and input power terminals have the same specifications. See section [Drive's power connection terminals](#) on page [286](#).

Motor cable requirements for CE & C-Tick compliance

The requirements in this section apply for CE or C-Tick compliance.

Minimum requirement (CE & C-Tick)

The motor cable must be a symmetrical three conductor cable with a concentric PE conductor or a four conductor cable with a concentric shield, however, a symmetrical constructed PE conductor is always recommended. The following figure shows the minimum requirement for the motor cable shield (for example, MCMK, Draka NK Cables).

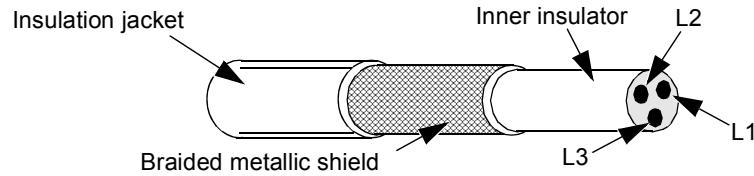

Recommendation for conductor layout

The following figure compares conductor layout features in motor cables.

| | |
|--|--|
| <p>Recommended (CE & C-Tick)</p> <p>Symmetrical shielded cable: three phase conductors and a concentric or otherwise symmetrically constructed PE conductor, and a shield</p> | <p>Allowed (CE & C-Tick)</p> <p>A separate PE conductor is required if the conductivity of the cable shield is < 50% of the conductivity of the phase conductor.</p> |
| <p>Not allowed for motor cables (CE & C-Tick)</p> <p>A four-conductor system: three phase conductors and a protective conductor, without a shield.</p> | <p>Allowed for motor cables with phase conductor cross section up to 10 mm².</p> |

Effective motor cable shields

The general rule for cable shield effectiveness is: the better and tighter the cable's shield, the lower the radiated emission level. The following figure shows an example of an effective construction (for example Ölflex-Servo-FD 780 CP, Lappkabel or MCCMK, NK Cables).

EN 61800-3 compliant motor cables

The most efficient EMC filtering can be achieved by following these rules:

- Motor cables must have an effective shield as described in section [Effective motor cable shields](#) on page [294](#).
- Motor cable shield wires must be twisted together into a bundle (pig-tail) – the bundle length must be less than five times its width – and connected to the terminal marked \perp (at the bottom right-hand corner of the drive).
- At the motor end, the motor cable shield must be earthed 360 degrees with an EMC cable gland, or the shield wires must be twisted together into a bundle (pig-tail) not longer than five times its width and connected to the PE terminal of the motor.
- See section [Motor cable length for 400 V drives](#), columns “[EMC limits](#)” on page [290](#) to check the maximum motor cable lengths and the need for filters for 400 V drives for IEC/EN 61800-3 compliance.

WARNING! Do not use RFI/EMC filters on IT systems.

Brake components

Availability

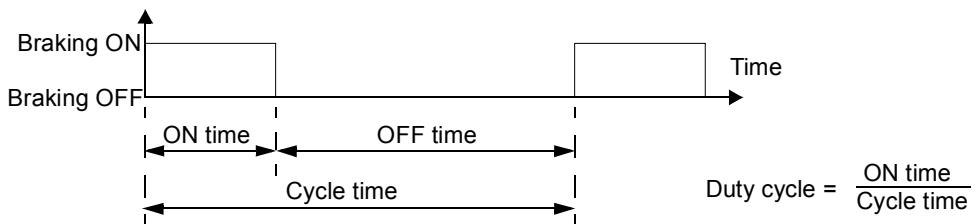

Braking availability for ACS550 drives, by frame size is:

- R1 and R2 – a built-in brake chopper is standard equipment. Add appropriate resistor, as determined using the following section. Resistors are available from ABB.
- R3...R6 – does not include an internal brake chopper. Connect a chopper and a resistor, or a brake unit to the DC link terminals on the drive. Contact your ABB representative for appropriate parts.

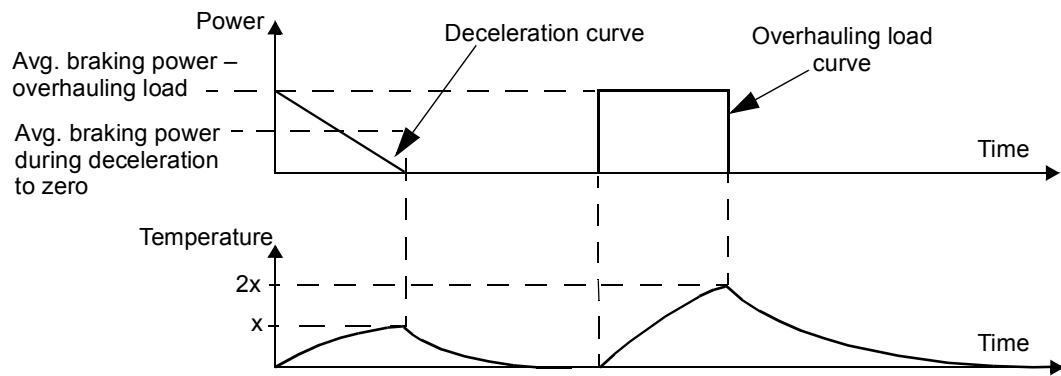

Selecting the braking resistors (frame sizes R1 and R2)

Braking resistor must meet three requirements:

- Resistance must be always higher than the minimum value R_{MIN} defined for the drive type in the following tables. Never use resistance below this value.
- Resistance must be low enough to be able to produce the desired braking torque. To achieve the maximum braking torque (the larger of 150% of heavy duty or 110% of nominal duty), the resistance must not exceed R_{MAX} . If maximum braking torque is not necessary, resistor values can exceed R_{MAX} .
- The resistor power rating must be high enough to dissipate the braking power. This requirement involves many factors:
 - the maximum continuous power rating for the resistor(s)
 - the rate at which the resistor changes temperature (resistor thermal time constant)
 - maximum braking time ON – If the regeneration (braking) power is larger than the resistor rated power, there is a limit to the ON time, or the resistor overheats before the OFF period begins.
 - minimum braking time OFF – If the regeneration (braking) power is larger than the resistor rated power, the OFF time must be large enough for the resistor to cool between ON periods.

- the peak braking power requirement
- type of braking (deceleration to zero vs. overhauling load) – During deceleration to zero, the generated power steadily decreases, averaging half of the peak power. For an overhauling load, the braking is countering an external force (gravity for example) and the braking power is constant. The total heat generated from an overhauling load is double the heat generated from deceleration to zero speed (for the same peak torque and ON time).

The many variables in the last requirement above are most easily dealt with using the following tables.

- First, determine your maximum braking time ON (ON_{MAX}), minimum braking time OFF (OFF_{MIN}) and load type (deceleration or overhauling load).
- Calculate duty cycle:

$$\text{Duty cycle} = \frac{ON_{MAX}}{(ON_{MAX} + OFF_{MIN})} \cdot 100\%$$

- In the appropriate table, find the column that best matches your data:
 - $ON_{MAX} \leq$ column specification and
 - Duty cycle \leq column specification
- Find the row that matches your drive.
- The minimum power rating for deceleration to zero is the value in the selected row/column.
- For overhauling loads, double the rating in the selected row/column, or use the "Continuous ON" column.

208...240 V drives

| Type ACS550- 01/U1- see below | Resistance | | Resistor ¹ minimum continuous power rating | | | | | P_{rcont} Continuous ON > 60 s ON > 25% Duty | |

| -06A1-6 | 224 | 80 | 228 | 429 | 629 | 1040 | 3573 | | | |
| -09A0-6 | 149 | 80 | 342 | 643 | 943 | 1560 | 5359 | | | |
| -011A-6 | 110 | 60 | 467 | 877 | 1286 | 2127 | 7308 | | | |
| -017A-6 | 75 | 60 | 685 | 1286 | 1886 | 3119 | 10718 | | | |

¹ Resistor time constant specification must be ≥ 85 seconds.

WARNING! Never use a brake resistor with a resistance below the minimum value specified for the particular drive. The drive and the internal chopper are not able to handle the overcurrent caused by the low resistance.

Symbols

R_{MIN} – Minimum allowed resistance of the braking resistor.

R_{MAX} – Maximum resistance allowed if maximum braking torque is necessary.

P_{rx} – Duty-cycle based resistor power rating in deceleration braking, where “x” is ON_{MAX} time.

Installing and wiring resistors

All resistors must be installed outside the drive module in a place where they can dissipate heat.

WARNING! The surface temperature of the resistor is very high, and air flowing from the resistor is very hot. Materials near the brake resistor must be non-flammable. Provide protection from accidental contact with the resistor.

To ensure that the input fuses protect the resistor cable, use resistor cables with the same rating as used for the power input to the drive.

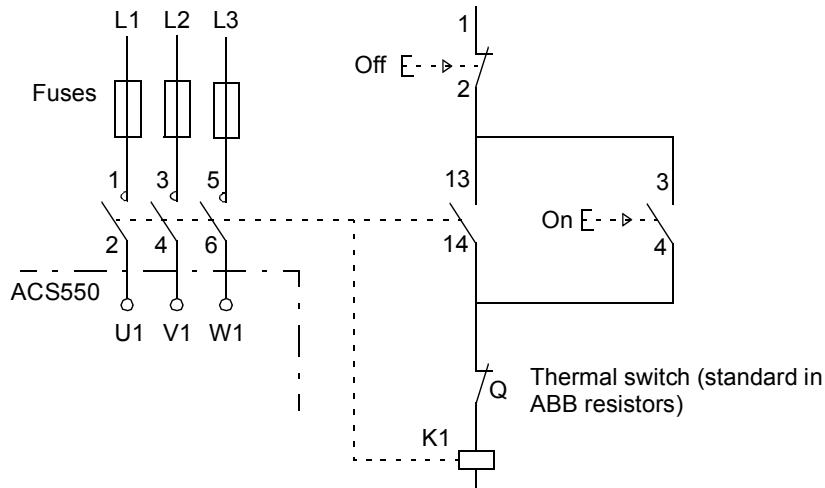

The maximum length of the resistor cable(s) is 10 m (33 ft). See section [Power connection diagrams](#) on page [25](#) for the resistor cable connection points.

Mandatory circuit protection

The following setup is essential for safety – it interrupts the main supply in fault situations involving chopper shorts:

- Equip the drive with a main contactor.
- Wire the contactor so that it opens if the resistor thermal switch opens (an overheated resistor opens the contactor).

Below is a simple wiring diagram example.

Parameter set-up

To enable dynamic braking, switch off the drive's overvoltage control [Set parameter 2005 = 0 (DISABLE)].

Control connections

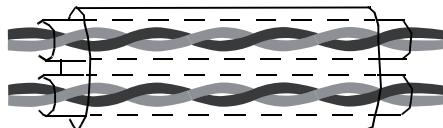

Control connection specifications

| Control connection specifications | |
|-----------------------------------|---|
| Analog inputs and outputs | See section Control terminals table on page 28. |
| Digital inputs | Digital input impedance 1.5 kohm. Maximum voltage for digital inputs is 30 V. |
| Relays (digital outputs) | <ul style="list-style-type: none"> Max. contact voltage: 30 V DC, 250 V AC Max. contact current / power: 6 A, 30 V DC; 1500 VA, 250 V AC Max. continuous current: 2 A rms ($\cos \varphi = 1$), 1 A rms ($\cos \varphi = 0.4$) Minimum load: 500 mW (12 V, 10 mA) Contact material: Silver-nickel (AgN) Isolation between relay digital outputs, test voltage: 2.5 kV rms, 1 minute |
| Cable specifications | See section Control terminals table on page 28. |

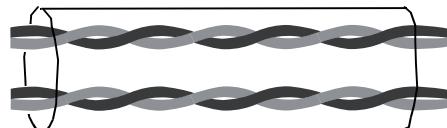

Control cables

General recommendations

Use multi-core cables with a braided copper wire shield, temperature rated at 60 °C (140 °F) or above:

Double shielded
Example: JAMAK by Draka NK Cables

Single shielded
Example: NOMAK by Draka NK Cables

For digital and analog I/O cables, twist the shield together into a bundle (pig-tail) not longer than five times its width and connect it to terminal X1-1 at the drive end. Leave the other end of the cable shield unconnected.

For connecting the shield wires of the RS485 cable, see the instructions (and notes) in section [Mechanical and electrical installation – EFB](#) on page 204.

Route control cables to minimize radiation to the cable:

- Route as far away as possible from the input power and motor cables (at least 20 cm [8 in]).
- Where control cables must cross power cables, make sure they are at an angle as near 90° as possible.
- Stay at least 20 cm (8 in) from the sides of the drive.

Use care in mixing signal types on the same cable:

- Do not mix relay-controlled signals using more than 30 V and other control signals in the same cable.
- Run relay-controlled signals as twisted pairs (especially if voltage > 48 V). Relay-controlled signals using less than 48 V can be run in the same cables as digital input signals.

Note: Never mix 24 V DC and 115/230 V AC signals in the same cable.

Analog cables

Recommendations for analog signal runs:

- Use double shielded, twisted pair cable.
- Use one individually shielded pair for each signal.
- Do not use a common return for different analog signals.

Digital cables

Recommendation for digital signal runs: A double shielded cable is the best alternative, but single-shielded, twisted, multi-pair cable is also usable.

Control panel cable

If the control panel is connected to the drive with a cable, use only Category 5 Patch ethernet cable. The maximum length that is tested to meet EMC specifications is 3 m (9.8 ft). Longer cables are susceptible to electromagnetic noise and must be user-tested to verify that EMC requirements are met. Where long runs are required (especially for runs longer than about 12 m [40 ft]), use a RS232/RS485 converter at each end and run RS485 cable.

Drive's control connection terminals

The following table provides specifications for the drive's control terminals

| Frame size | Control | | | |
|------------|--------------------------------|-----|-------------------|-------|
| | Maximum wire size ¹ | | Tightening torque | |
| | mm ² | AWG | N·m | lb·ft |
| All | 1.5 | 16 | 0.4 | 0.3 |

¹ Values given for solid wires.
For stranded wires, the maximum size is 1 mm².

Efficiency

Approximately 98% at nominal power level.

Losses, cooling data and noise

| Cooling specifications | |
|------------------------|---|
| Method | Internal fan, flow direction from bottom to top. |
| Requirement | Free space above and below the ACS550 drive: 200 mm (8 in). Free space is not required on the drive's sides – ACS550 drives can be mounted side-by-side. |

Air flow, 208...240 V drives

The following table lists the requirements for the cooling air flow data for 208...240 V drives at full load in all ambient conditions listed in [Ambient conditions](#) on page 307.

| Drive | Heat dissipation | Air flow | | Noise | | |
|------------|------------------|----------|--------|-------------------|----------------------|----|
| ACS550-x1- | Frame size | W | BTU/hr | m ³ /h | ft ³ /min | dB |
| -04A6-2 | R1 | 55 | 189 | 44 | 26 | 52 |
| -06A6-2 | R1 | 73 | 249 | 44 | 26 | 52 |

| ACS550-U1- | Frame size | W | BTU/hr | m ³ /h | ft ³ /min | dB |
| -144A-6 | R6 | 2310 | 7889 | 405 | 238 | 77 |

00467918.xls C

Dimensions and weights

The dimensions and mass for the ACS550 depend on the frame size and enclosure type. If unsure of the frame size, first, find the "Type" designation on the drive labels (see sections *The labels contain information on the Type designation (page 17)*, *Ratings and frame size (page 17)*, *Serial number (page 17)*, *degree of protection (see also Degrees of protection on page 306) and valid markings (see also Markings on page 309)*, on page 17 and *Drive labels* on page 16). Then look up that type designation in the rating tables (see chapter *Technical data*, page 277), to determine the frame size.

ACS550-01-290A-4, IP21 / UL type 1: 80 kg / 176 lb.
2. ACS550-x1-246A-4, IP54 / UL type 12: 80 kg / 176 lb
ACS550-01-290A-4, IP54: 90 kg / 198 lb (UL type 12 not available).

Degrees of protection

Available enclosures:

- IP21 / UL type 1 enclosure. The site must be free of airborne dust, corrosive gases or liquids, and conductive contaminants such as condensation, carbon dust and metallic particles.
- IP54 / UL type 12 enclosure. This enclosure provides protection from airborne dust and light sprays or splashing water from all directions.

Note: UL type 12 enclosure is not available for type ACS550-01-290A-4.

Compared to the IP21 / UL type 1 enclosure, the IP54 / UL type 12 enclosure has:

- the same internal plastic shell as the IP21 enclosure
- a different outer plastic cover
- an additional internal fan to improve cooling
- larger dimensions
- the same rating (does not require a derating).

Ambient conditions

The following table lists the ACS550 environmental requirements.

| Ambient environment requirements | | |
|---|--|--|
| | Installation site | Storage and transportation in the protective package |
| Altitude | <ul style="list-style-type: none"> • 0...1000 m (0...3 300 ft) • 1000...2000 m (3 300...6 600 ft) if P_N and I_{2N} derated 1% every 100 m above 1000 m (300 ft above 3 300 ft) | |
| Ambient temperature | <ul style="list-style-type: none"> • Min. -15 °C (5 °F) – no frost allowed • Max. (fsw = 1 or 4) 40 °C (104 °F); 50 °C (122 °F) if P_N and I_{2N} derated to 90% • Max. (fsw = 8) 40 °C (104 °F) if P_N and I_{2N} derated to 80% • Max. (fsw = 12) 30 °C (86 °F) if P_N and I_{2N} derated to 65% (to 50% for 600 V, R4 frame sizes, that is for ACS550-U1-032A-6 ... ACS550-U1-062A-6) | -40...70 °C (-40...158 °F) |
| Relative humidity | 5...95%, no condensation allowed | |
| Contamination levels (IEC 60721-3-3) | <ul style="list-style-type: none"> • No conductive dust allowed. • The ACS550 should be installed in clean air according to enclosure classification. • Cooling air must be clean, free from corrosive materials and free from electrically conductive dust. • Chemical gases: Class 3C2 • Solid particles: Class 3S2 | <p>Storage</p> <ul style="list-style-type: none"> • No conductive dust allowed. • Chemical gases: Class 1C2 • Solid particles: Class 1S2 <p>Transportation</p> <ul style="list-style-type: none"> • No conductive dust allowed. • Chemical gases: Class 2C2 • Solid particles: Class 2S2 |

The following table lists the standard stress testing that the ACS550 passes.

| Stress tests | | |
|-----------------------------|--|--|
| | Without shipping package | Inside shipping package |
| Sinusoidal vibration | <p>Mechanical conditions: In accordance with IEC 60721-3-3, Class 3M4</p> <ul style="list-style-type: none"> • 2...9 Hz 3.0 mm (0.12 in) • 9...200 Hz 10 m/s² (33 ft/s²) | In accordance with ISTA 1A and 1B specifications. |
| Shock | Not allowed | In accordance with IEC 68-2-29: max. 100 m/s ² (330 ft/s ²), 11ms |
| Free fall | Not allowed | <ul style="list-style-type: none"> • 76 cm (30 in), frame size R1 • 61cm (24 in), frame size R2 • 46 cm (18 in), frame size R3 • 31 cm (12 in), frame size R4 • 25 cm (10 in), frame size R5 • 15 cm (6 in), frame size R6 |

Materials

| Material specifications | |
|-------------------------|---|
| Drive enclosure | <ul style="list-style-type: none"> • PC/ABS 2.5 mm, color NCS 1502-Y or NCS 7000-N • Hot-dip zinc coated steel sheet 1.5...2 mm, thickness of coating 20 micrometers. If the surface is painted, the total thickness of the coating (zinc and paint) is 80...100 micrometers. • Cast aluminium AISI • Extruded aluminium AISI |
| Package | Corrugated board, expanded polystyrene, plywood, raw wood (heat dried). Package wrap consists of one or more of the following: PE-LD plastic wrap, PP or steel bands. |
| Disposal | <p>The drive contains raw materials that should be recycled to preserve energy and natural resources. The package materials are environmentally compatible and recyclable. All metal parts can be recycled. The plastic parts can either be recycled or burned under controlled circumstances, according to local regulations. Most recyclable parts are marked with recycling marks.</p> <p>If recycling is not feasible, all parts excluding electrolytic capacitors and printed circuit boards can be landfilled. The DC capacitors contain electrolyte and, if the drive is not provided with the RoHS marking, the printed circuit boards contain lead, both of which are classified as hazardous waste within the EU. They must be removed and handled according to local regulations.</p> <p>For further information on environmental aspects and more detailed recycling instructions, contact your local ABB representative.</p> |

Applicable standards

Drive compliance with the following standards is identified by the standard “marks” on the type designation label. The following standards are applicable to the drive:

| Mark | Applicable standards | |
|------|---------------------------------------|--|
| | EN 50178:1997 | Electronic equipment for use in power installations |
| | IEC/EN 60204-1:2005 | Safety of machinery. Electrical equipment of machines. Part 1: General requirements. <i>Provisions for compliance</i> : The final assembler of the machine is responsible for installing: <ul style="list-style-type: none"> • an emergency-stop device • a supply disconnecting device. |
| | IEC/EN 60529:1989 + A1:1999 + A2:2013 | Degrees of protection provided by enclosures (IP code) |
| | IEC 60664-1:2002 | Insulation coordination for equipment within low-voltage systems. Part 1: Principles, requirements and tests |
| | IEC/EN 61800-5-1:2007 | Adjustable speed electrical power drive systems. Part 5-1: Safety requirements. Electrical, thermal and energy |
| | IEC/EN 61800-3:2004 +A1:2012 | Adjustable speed electrical power drive systems. Part 3: EMC requirements and specific test methods |
| | IEC/EN 61000-3-12:2011 | Electromagnetic compatibility (EMC). Part 3-12: Limits - Limits for harmonic currents produced by equipment connected to public low-voltage systems with input current > 16 A and = 75 A per phase |
| | IEC/EN 61800-3:2004 +A1:2012 | Adjustable speed electrical power drive systems. Part 3: EMC requirements and specific test methods |
| | UL 508C | UL Standard for Safety, Power Conversion Equipment, third edition |
| | C22.2 No. 14 | CSA Standard for Industrial Control Equipment (for ACS550-U1 drives only) |

Markings

CE marking

A CE mark is attached to the drive to verify that the drive follows the provisions of the European Low Voltage, EMC and RoHS Directives

Note: The 600 V ACS550-U1 drives are not CE approved.

Compliance with the European Low Voltage Directive

The compliance with the European Low Voltage Directive has been verified according to standards IEC/EN 60204-1:2005 and EN 50178:1997.

Compliance with the European EMC Directive

The Directive defines the requirements for immunity and emissions of electrical equipment used within the European Union. The EMC product standard IEC/EN 61800-3:2004 +A1:2012 covers requirements stated for drives.

Compliance with IEC/EN 61800-3:2004 +A1:2012

See page [311](#).

C-Tick marking

The drive carries C-Tick marking.

C-Tick marking is required in Australia and New Zealand. A C-Tick mark is attached to the drive to verify compliance with the relevant standard (IEC 61800-3:2004) – Adjustable speed electrical power drive systems – Part 3: EMC product standard including specific test methods), mandated by the Trans-Tasman Electromagnetic Compatibility Scheme.

The Trans-Tasman Electromagnetic Compatibility Scheme (EMCS) was introduced by the Australian Communication Authority (ACA) and the Radio Spectrum Management Group (RSM) of the New Zealand Ministry of Economic Development (NZMED) in November 2001. The aim of the scheme is to protect the radio frequency spectrum by introducing technical limits for emission from electrical/electronic products.

Compliance with IEC/EN 61800-3:004

See page [311](#).

UL/CSA markings

An UL mark is attached to ACS550 drives to verify that the drive follows the provisions of UL 508C.

A CSA mark is attached to ACS550-U1 type drives to verify that the drive follows the provisions of C22.2 NO. 14.

The ACS550 is suitable for use in a circuit capable of delivering not more than 100 kA RMS symmetrical amperes, 600 V maximum. The ampere rating is based on tests done according to UL 508.

Branch circuit protection must be provided in accordance with local codes.

The ACS550 has an electronic motor protection feature that complies with the requirements of UL 508C and, for ACS550-U1, C22.2 No. 14. When this feature is selected and properly adjusted, additional overload protection is not required unless more than one motor is connected to the drive or unless additional protection is required by applicable safety regulations. See parameters 3005 (MOT THERM PROT) and 3006 (MOT THERM RATE).

The drives are to be used in a controlled environment. See section [Ambient conditions](#) on page [307](#) for specific limits.

Note: For open type enclosures, i.e. drives without the conduit box and/or cover for IP21 / UL type 1 drives, or without the conduit plate and/or hood for IP54 / UL type 12 drives, the drive must be mounted inside an enclosure in accordance with National Electric Code and local electrical codes.

Brake choppers, when applied with appropriately sized brake resistors, will allow the drive to dissipate regenerative energy (normally associated with quickly decelerating a motor). Frame sizes R1 and R2 have a built-in brake chopper as standard

equipment. For frame sizes R3...R6, contact your local ABB representative for appropriate parts. See section [Brake components](#) on page [295](#).

EAC marking

The drive has EAC certification. EAC marking is required in Russia, Belarus and Kazakhstan.

IEC/EN 61800-3:2004 Definitions

EMC stands for **Electromagnetic Compatibility**. It is the ability of electrical/electronic equipment to operate without problems within an electromagnetic environment. Likewise, the equipment must not disturb or interfere with any other product or system within its locality.

First environment includes establishments connected to a low-voltage network which supplies buildings used for domestic purposes.

Second environment includes establishments connected to a network not directly supplying domestic premises.

Drive of category C2: drive of rated voltage less than 1000 V and intended to be installed and commissioned only by a professional when used in the first environment.

Note: A professional is a person or organization having necessary skills in installing and/or commissioning power drive systems, including their EMC aspects.

Category C2 has the same EMC emission limits as the earlier class first environment restricted distribution. EMC standard IEC/EN 61800-3 does not any more restrict the distribution of the drive, but the using, installation and commissioning are defined.

Drive of category C3: drive of rated voltage less than 1000 V, intended for use in the second environment and not intended for use in the first environment.

Category C3 has the same EMC emission limits as the earlier class second environment unrestricted distribution.

Compliance with the IEC/EN 61800-3:2004 +A1:2012

The immunity performance of the drive complies with the demands of IEC/EN 61800-3, category C2 (see page [311](#) for IEC/EN 61800-3 definitions). The emission limits of IEC/EN 61800-3 comply with the provisions described below.

First environment (drives of category C2)

1. The internal EMC filter is connected.
2. The motor and control cables are selected as specified in this manual.
3. The drive is installed according to the instructions given in this manual.
4. The motor cable length does not exceed the allowed maximum length specified in section [Motor cable length for 400 V drives](#) on page [290](#) for the frame size and switching frequency in use.

WARNING! In a domestic environment, this product may cause radio inference, in which case supplementary mitigation measures may be required.

Second environment (drives of category C3)

1. The internal EMC filter is connected.
2. The motor and control cables are selected as specified in this manual.
3. The drive is installed according to the instructions given in this manual.
4. The motor cable length does not exceed the allowed maximum length specified in section *Motor cable length for 400 V drives* on page 290 for the frame size and switching frequency in use.

WARNING! A drive of category C3 is not intended to be used on a low-voltage public network which supplies domestic premises. Radio frequency interference is expected if the drive is used on such a network.

Note: It is not allowed to install a drive with the internal EMC filter connected on IT (ungrounded) systems. The supply network becomes connected to ground potential through the EMC filter capacitors, which may cause danger or damage the drive.

Note: It is not allowed to install a drive with the internal EMC filter connected to a corner grounded TN system as this would damage the drive.

Further information

Product and service inquiries

Address any inquiries about the product to your local ABB representative, quoting the type designation and serial number of the unit in question. A listing of ABB sales, support and service contacts can be found by navigating to www.abb.com/searchchannels.

Product training

For information on ABB product training, navigate to www.abb.com/drives and select *Training courses*.

Providing feedback on ABB Drives manuals

Your comments on our manuals are welcome. Go to www.abb.com/drives and select *Document Library – Manuals feedback form (LV AC drives)*.

Document library on the Internet

You can find manuals and other product documents in PDF format on the Internet. Go to www.abb.com/drives and select *Document Library*. You can browse the library or enter selection criteria, for example a document code, in the search field.
